

# SoftSquare

## Vue.js Task

### User Stories

- As a user, I need to be able to add an activity (item to the list).
- As a user, I need to be able to update the activity (toggle status between completed/not completed).
- As a user, I need to be able to delete the activity.
- As a user, I need to be able to list all the activities when the page is first loaded or reloaded.

### Notes

- The application should follow the Flux/Redux architecture principles in terms of app state management and uni-directional data flow.
- In order to maintain the list state between the page reloads, you can use localStorage.
- Design and create an API blueprint for the REST API using the service of your choice, this API should cover all the user stories above.
